

**General guidelines to improve the contents of your final paper for CONFERENCE**  
**Please take note of these comments before writing your paper**

1. Always state the relation with the simulation or related field throughout your **entire** paper. The relation can be threefold: your research is on simulation itself, your research **using** simulation in another field, or your research contributes to the field of simulation.
2. If your paper describes **a method** or **a technique**, always give examples of the **use** of that method or technique. If possible, include (references to) empirical evidence that your method or technique works the way it is supposed to.
3. If your paper describes **an application example**, always point out the **methods** and **techniques** you used to get the results that are described in the paper. Add screen-dumps if possible. Literature references might be sufficient.
4. Give an indication of the current **stage** your work or research is in. Is it still preliminary? Is there a commercially available product on the market? Is your work being applied by others or in other domains?
5. After the keywords start your paper with a brief **abstract**. Do not include material in the abstract which will not be described in the paper.
6. Always indicate the **novel aspects** that will be covered in the paper with respect to your earlier work and that of others. In what way does your contribution differ from what has been done before?
7. Make sure your **introduction** is appropriate. An introduction should give the general background for your research, and references to general literature on the subject for interested readers.
8. Make sure your **literature** references are correct, and up-to-date. Others will use your paper to find more information on the subject your paper is about. **Do not only use your own references**, but also refer to work done by others.
9. End your paper with **conclusions** and **further research** and recommendations. Your conclusions must be based on the material that can be found in the paper!
10. If you are not a native English speaker, have your English **corrected** before you send in your final paper. If the use of the English language is below standards, your paper might be rejected.
11. **Email OR enclose the copy of your abstract, keywords and biography on CD-ROM in TEXT and HTML format, for PC and a copy of your full paper in PDF (preferred format) or MS-Word.** This will be uploaded on our WWW node for general conference information purposes.
12. **Make sure your paper conforms to the guidelines as set out in the author instructions (2 column, first page, footnotes, etc...), see 10 Deadly Sins.**
